

Hurd. Our green story in black & white.

At Hurd, we're committed to green manufacturing and green building today, just as we have been for much of our almost 90 year existence. Our environmental stewardship is firmly grounded in our continual commitment to pioneering some of the most energy efficient windows and doors available, as well as respect for the environmental impacts of our manufacturing practices.

- We are an **environmentally responsible** company and have been since 1919.
- We partner with **responsible suppliers**.
- Our products boast some of the best energy efficient ratings in the industry. Bottom-line, a window's energy efficiency is one of the most important elements to look for when making a green buying decision for a building.
- We are an **Energy Star® partner** and nearly every window we make bears an **NFRC certification label** giving full disclosure of its energy efficiency, solar heat gain coefficient, air leakage and light transmittance.
- We invented **CoreGuard™** to promote **long-life sustainable wood windows** and protect the wood from moisture. The CoreGuard ingredients are non-volatile and are among the most environmentally-friendly preservatives available.
- We offer **free anodizing** as a standard exterior clad option, which is more environmentally friendly than painted cladding.

- We are an exclusive supplier of **ClimaGuard SPF™** glazing. A smart solution to promote sustainable interiors by **blocking harmful UV rays**. ClimaGuard SPF is also one of the only glazing solutions available today that is recommended by the Skin Cancer Foundation as an effective UV protectant.
- We offer one of the **largest glazing offerings**, so consumers can "fine-tune" their homes with the most energy efficient solutions.
- We use pine in our standard construction, which is a **renewable resource**.
- We offer **lyptus**, a farm raised rapidly growing alternative to mahogany, as part of our wood species offering.
- All of our sealants, primer paint and adhesives have **low VOC content**.
- All of our wood scrap is chipped and sold for **recycle** or further use.
- The glass we purchase contains approximately **25% industrial recycle**.
- The aluminum we purchase contains approximately **25% post consumer recycled scrap**.
- We have an on-staff **Environmental, Health & Safety Department** continually focused on building a better work environment for our employees and implementing new forward-thinking environmental practices.
- Our products can contribute to **LEED and NAHB green certification**.

Hurd
Windows and Doors

Everybody's talking about green building.

Most consumers today want a greener home, but can't articulate what it means. Originally, a green home may have incorporated some recycled materials, used some sustainable lumber, or had energy-efficient windows. It may even have had some rather ugly solar panels on the roof.

Today's definition goes far beyond that. Green building brings together a vast array of practices that result in more efficient use of energy, materials and water. It lowers operating costs, improves homeowner comfort and health, and it can even lessen the strain on local infrastructure. Today, green building encompasses home design, site development, construction efficiencies, overall operation and maintenance of the dwelling.

Hurd windows and doors can contribute significantly to the green benefits of a home. In fact, choosing Hurd windows and doors may be the easiest decision of any project. They're designed and built "up North" where the winters last several months and the summer sun is blazing. So, of necessity, Hurd products have always offered superior energy efficiency, durability and performance.

Exclusive green features.

- ClimaGuard SPF™ is the only clear glass treatment that blocks **99.9% of damaging UV-A and UV-B rays**. It dramatically reduces fading, and extends the useful life of carpeting, furniture, and other furnishings in the home.
- The best wood sustainability in the industry with Hurd's patent-pending **CoreGuard™**. We've invented a wood treatment that actually penetrates to the very core of the wood to provide envelope protection against pests and rotting.
- Our heavy-duty extruded aluminum clad exterior lasts longer than others and contains **25% post consumer recycled scrap**.

A simple guide to green building.
